

PCA of SWE-bench Standardized Residuals (colored by base model)

PCA of standardized residuals $(y_{ij} - p_j) / \sqrt{p_j(1-p_j)}$ from 158 subjects x 500 SWE-bench tasks.
Standardization gives equal weight to all tasks regardless of difficulty. Grey = unknown/singleton base model.
Data: Liu et al., "BRIDGE" (arXiv:2602.07267, 2026).
